Catalog No. 9

# CALIFORNIA Tractor Drawn IMPLEMENT

Manufactured By  
**California Plow Company**  
San Jose California U.S.A.

NAL GIFT  
AUGUST 1964

## INTRODUCTORY

OUR new Power Farming Implement Catalog, which we have pleasure in submitting to you, contains several new implements of interest to the Pacific Coast Farmer, Orchardist, Vineyardist, and Seedsman.

The Company has spared no expense to keep abreast of the times and to give its patrons the best that can be produced, proof of which is evidenced in the new features which will be found in our entire line.

The great demand for our Special Tractor Implements during the past few years clearly demonstrates we have the confidence of the farming public, a fact that we attribute to our long experience in both factory and field, and in applying the knowledge thus acquired to the varying needs for the special cultivation of the various kinds of soil on the Pacific Coast, in simplifying the different tractor tools, and yet withal, ever adding to their effectiveness.

The tractor implements listed for this year we are confident will further increase the Company's reputation; they are more than up-to-date, and as usual, will set the pace for competition. Each line merits the consideration of those about to buy.

In the following pages we endeavor to illustrate and describe the prominent characteristics of our manufactures, but our experimental staff is continually developing improvements, which may not always be shown in the illustrations.

Any information that may be desired will gladly be furnished on application.

(CALIFORNIA PLOW COMPANY—Formerly Spalding-Robbins Disc Plow Co.)

# California "Ground Hog" Tractor Plow

Awarded Gold Medal  
P. P. I. E. San Francisco  
1915

A PLOW designed to meet conditions in California, and in the Western Mountain States, Texas and Mexico, where hundreds of them are giving complete satisfaction behind every size and make of tractor.

These plows are to be found at work not only in the United States, Canada and Mexico, but all over the world—some 3000 having been sold in Australasia. It is correct in design and strongly reinforced for heavy work and will last a lifetime.

It is simple in construction—fool-proof—and easy to handle either single or in tandem units of 2, 3 or 4 plows. The frame is triangular—which stands for great strength. The wheels are 30 inches in diameter and roll easy. The wheel bearings are equipped with dust-proof boxes which need lubrication about twice a month. Note the heavy weight in rear furrow wheel—for heavy soils leave it in—remove it for lighter soils. If levers are desired they can be substituted for the screw lift.

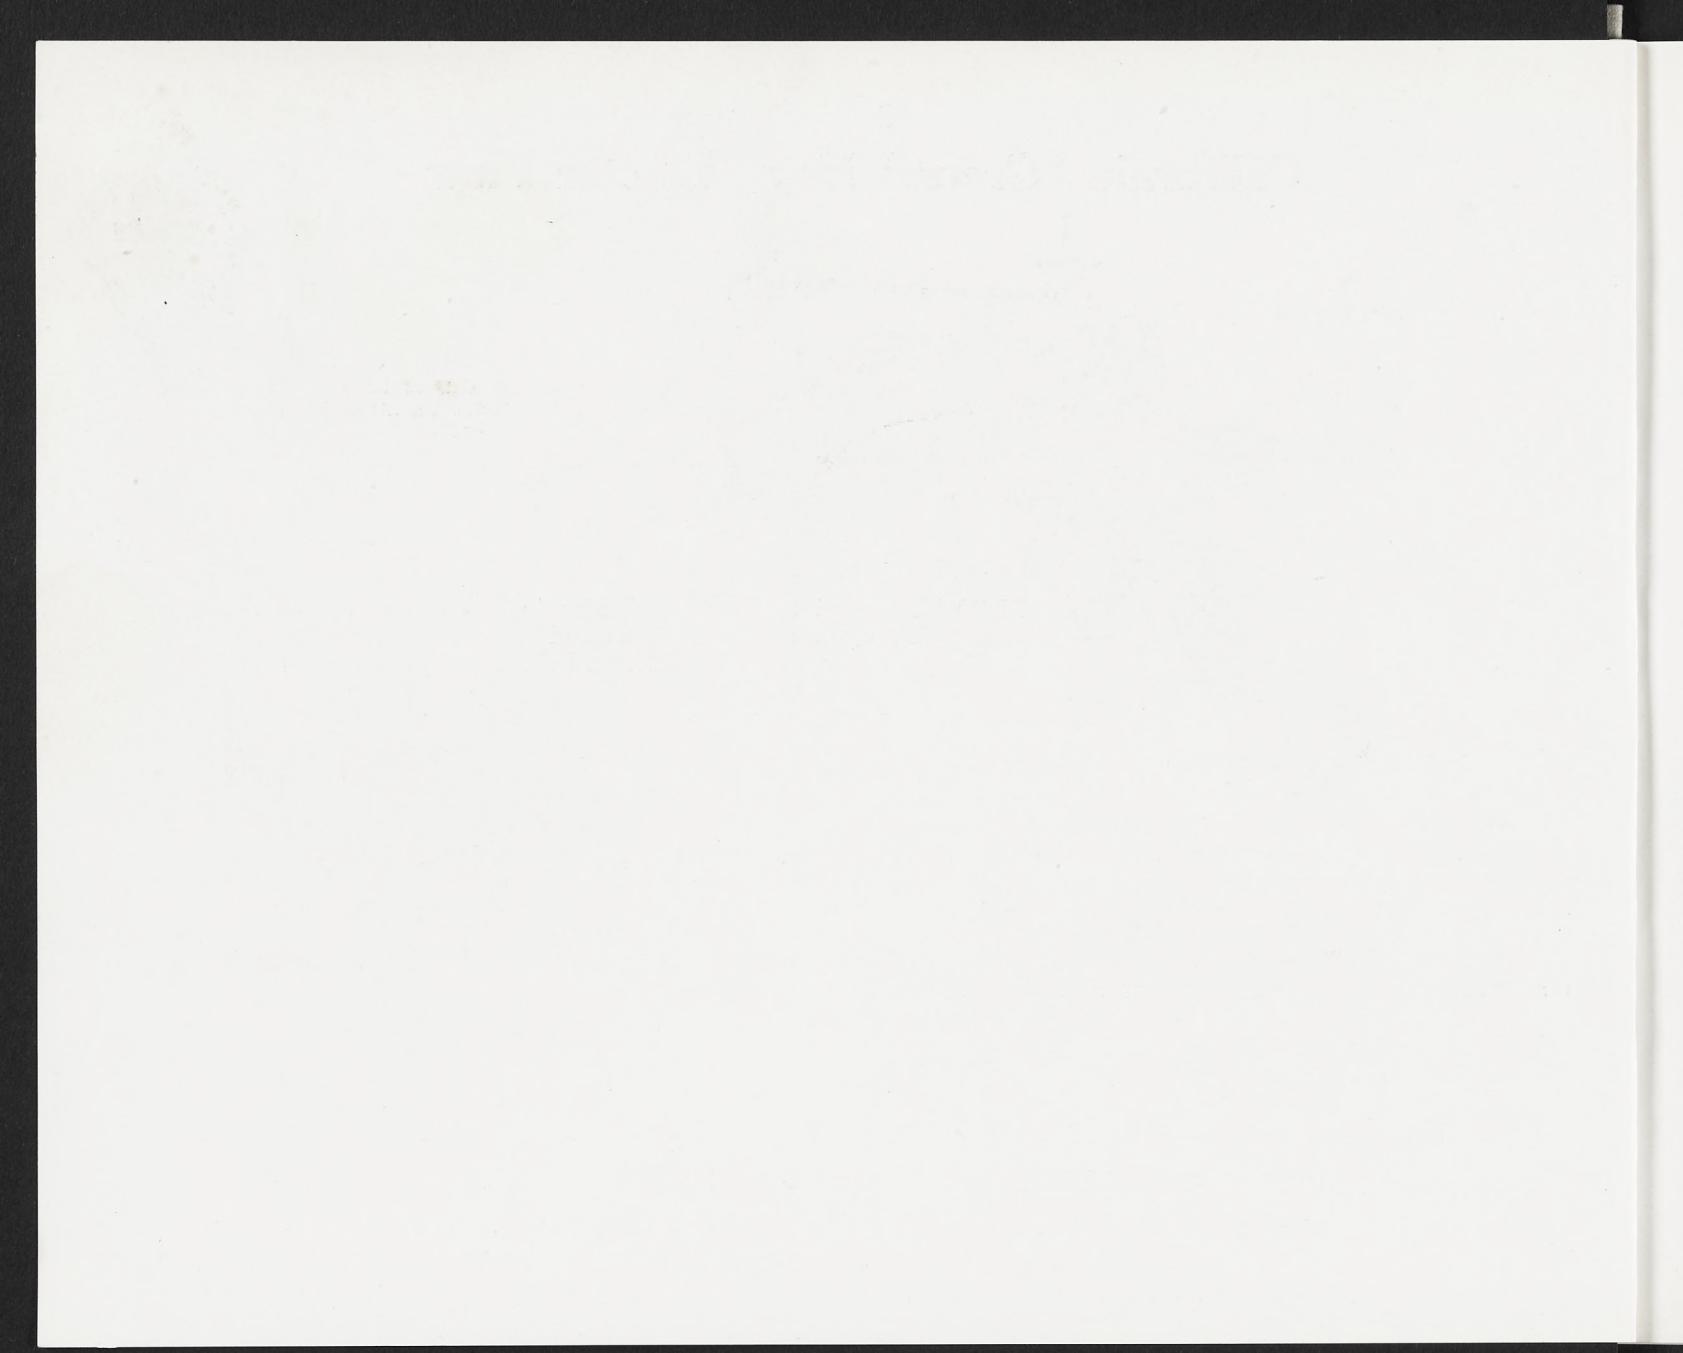

Discs can be adjusted to cut 6-inch, 8-inch or 10-inch furrows. The "Ground Hog" will satisfactorily plow adobe or other hard, dry soils that other plows fail to penetrate.

Size	Approx. Weight	Price
5 Furrow Plow	2850	\$.....
6 Furrow Plow	3000	\$.....
8 Furrow Plow	3200	\$.....
Extra wheel weights 80 lbs., \$	150 lbs., \$	270 lbs., \$.....

**CALIFORNIA PLOW COMPANY**

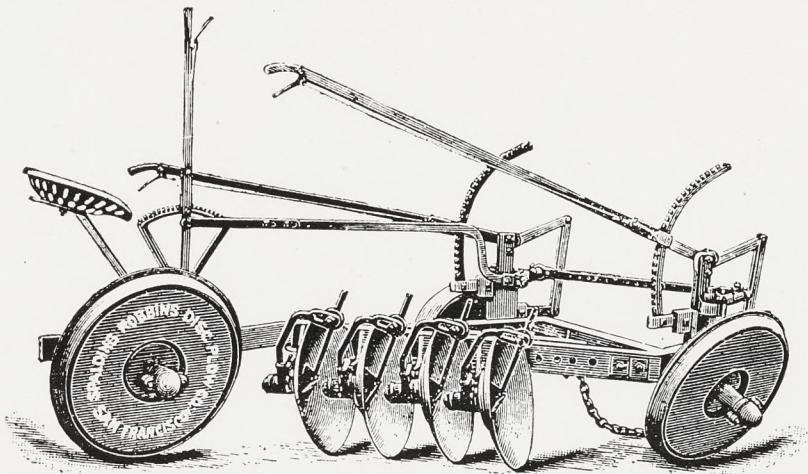

140 POLHEMUS ST.

SAN JOSE, CALIF.

# California Heavy Duty Horse Plow

Awarded Gold Medal P. P. I. E., S. F., 1915

A strong and dependable Plow for rough country and extra hard soils. Six horses will handle this 4 Disc Plow in dry adobe and do excellent work. For these plows the power required is much less than for mouldboard plows of equal number of furrows, therefore a saving in the number of horses required; also a saving of one or more harrowings—owing to the discs cutting 8" furrows, which size is recommended for all ordinary farm work. The narrower the furrow, the more perfect the pulverization, rendering unnecessary a large amount of harrow work.

It is built of the same material as our heavy tractor plows—and will last a lifetime.

By a system of weighting, it works in adobe or other hard ground where other plows fail. No need to wait for rain—you can plow during the dry season—when you are ready to plow.

No shares to renew or sharpen; no hanging under stones or roots. It either rolls over them or cuts them.

The 8-inch furrow is our standard, but all plows are adjustable to cut 6½, 8 or 10-inch furrows.

Size	Approx. Weight	Size Discs	Price
4 Furrow Plow	2100 lbs.	24"	.....
5 "	2550 lbs.	24"	.....
6 "	2800 lbs.	24"	.....

Extra charge for 26-inch Discs, \$2.00 each; extra weights, 80 lbs., \$9.60 each; 150 lbs., \$18.00 each.

An outfit to make an additional furrow, if purchased with plow, \$25.00 extra.

## Stump Jump Disc Plow

### Convertible to One Furrow Less

A most perfect implement to break up new land. It is the only stump-jump plow that will work satisfactorily in land where there are stones, stumps and roots.

If a disc strikes any of these obstacles that one disc alone will jump or roll over it, while all the others cling to the soil.

This plow is built of the same material as our heavy tractor plows, and is so constructed that it is suitable for use with either horses or tractor. It will plow as hard land as our California Heavy Duty Plow.

In exceedingly hard ground it may be found necessary to use extra weights in the furrow wheels.

Size	Approx. Weight	Size Discs	Price
4 Furrow Plow	2500 lbs.	24"	.....
5 " "	2750 lbs.	24"	.....
6 " "	3000 lbs.	24"	.....

Extra charge for 26" Discs, \$2.00 each. Extra weights, 80 lbs., \$9.60 each; 150 lbs. \$18.00 each.

As a gang plow

As a deep tiller

## California Deep Tilling Machine and Combination Plow

P. B. Crane  
Pat. July 1, 1919

**T**HIS is a new machine for plowing and pulverizing the soil 8 to 16 inches deep and 8 to 16 inches wide—as adjusted. Deep Tilling, however, is not necessary every year, therefore we have built this plow so that it is convertible into a sulky plow—gang plow—or deep tiller, combining three machines in one.

In deep tilling the front disc follows in the furrow made by the rear disc on the previous round—the rear disc opens up a new furrow and is controlled by a gauge wheel that holds it at a uniform depth under any and all conditions, thereby securing a uniform seed bed over all the field.

The old top soil and the new bottom soil are thoroughly pulverized and mixed together. The full value of the old soil is retained and the new soil is mixed with it on top. For the deep breaking-up of lands preparatory to setting out orchards, planting tree-nurseries, vines, orange trees, etc., this plow is strongly recommended. Suitable for Fordson and other small tractors.

Weight 1000 pounds

Discs 24 inches or 26 inches

Price \$.....

(OVER)

## Better Farming Made Possible By the Use of The California Deep Tiller

THIS MACHINE was specially designed for plowing the soil to a greater depth than heretofore accomplished by any mechanical means, or by any implement (other than the spade) and to prepare a thoroughly good and well drained seed bed at a single operation. It makes a remarkably fine seed bed which consumes moisture. It mixes the bottom soil with the top soil and completely buries trash and all sorts of vegetable growth which produces humus in the soil.

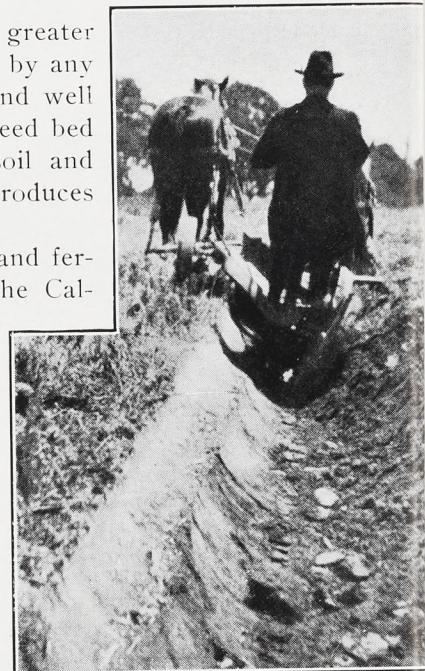

The benefits of plowing under surface growths to rot and warm and fertilize the soil, needs no recommendation from us—suffice to say that the California Deep Tiller will put the weeds and the weed seed so deep that they cannot sprout, must decay and thereby add humus to the soil, enriching instead of depleting the land, and giving the growing crops the free and unrestricted use of all moisture, thus insuring an increase of twenty to one hundred per cent in yield.

**Deep Tilling creates a reservoir** all over the field for the reception and retention of rainfall as fast as it comes, and in sufficient quantity to carry the crop through any period of draught.

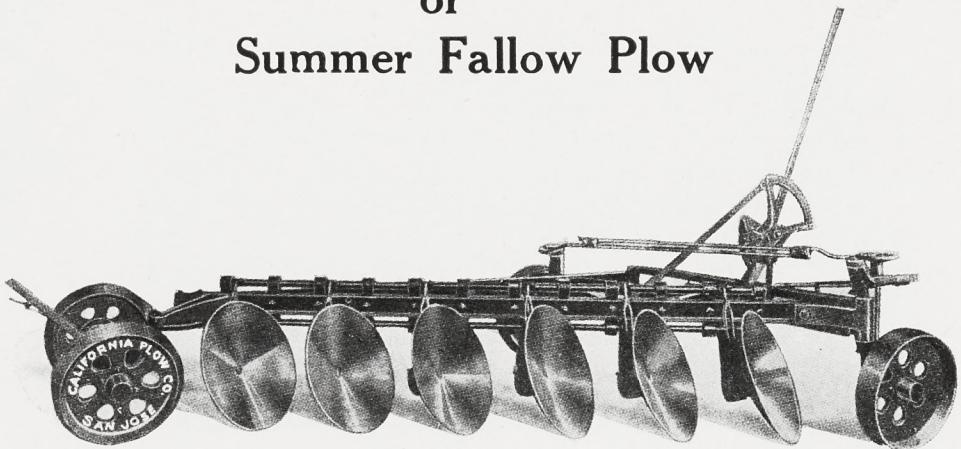

Were it possible to plow even twelve inches deep with a mould-board plow, how could the land be pulverized afterwards to a depth of twelve inches? We know of no pulverizer that will go, to that depth, therefore it will be seen that a DISK, instead of a mould-board must be used, as the disc thoroughly pulverizes the soil as it turns the furrow slice, and double a portion must be had in each furrow, as it would be impossible for one disc to go that deep and do perfect work.

**REMEMBER**—deep tilling means less water for the irrigationist and more moisture for the dry farmer. It means better soil and larger crops.

Every farmer should own this combination tool.

# One-way Disc Cultivator and Weeder or Summer Fallow Plow

This implement has been designed for the small tractor.

It is simple—strong and sure service—made of steel and iron of high grade quality and is equipped with the best bearings for convenient and economic lubrication we have ever seen.

It works with wonderful efficiency in fallow or stubble land where it will thoroughly break up and pulverize the surface soil, **destroy morning glory weeds and volunteer grain**, leaving behind it a good tilth to receive the seed. It leaves the surface level and free from ridges or crowns.

With its two rear wheels it will run steadily and true behind the tractor in side hill cultivation.

It is easy to handle and the operator has full control of depth or shallowness of work without leaving the seat of tractor.

This implement is indispensable in the orchard or vineyard.

It will do the work of a Disc Harrow and do it better.

The Pulverizer Wheel

## The Cunningham Land Pulverizer

Awarded Silver Medal P. P. I. E. San Francisco, 1915. Highest possible award.

### A PULVERIZER THAT PARALYZES CLODS AND WORKS CLOSE UP TO TREES

THE Cunningham Pulverizer is an actual rain preserver. Its sharp spear points,  $2\frac{3}{4}$  inches long, puncture all clods, even beneath the surface, so that the rain stays where it falls, whereas the continuous roller type makes gutters to start the water running to the low spots. It makes a perfect seed bed—stops evaporation—preserves moisture—breaks crust—breaks down ridges—closes cracks—protects roots from the drying north winds—works under and close up to trees. It is the best clod smasher ever made for farmer, orchardist, vineyardist, nurseryman, and seedsman. The machine is all metal except the pole,—axles are 2 inches in diameter. Built for either horse or tractor use.

Size	Diameter	Weight	Horses Required	Price
4 foot	18 inches	650	1	\$.....
6 foot	18 inches	950	2	\$.....
7 foot	18 inches	1100	2-3	\$.....
8 foot	18 inches	1250	3-4	\$.....
10 foot	18 inches	1600	4-5	\$.....

Doubletrees and neckyoke extra.

24-inch diameter Pulverizer with spear points  $3\frac{1}{2}$  inches long, built in 8 and 10-foot sizes only.

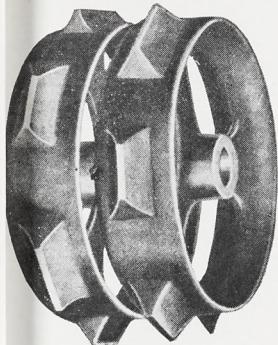

**CALIFORNIA PLOW COMPANY**

140 POLHEMUS ST.

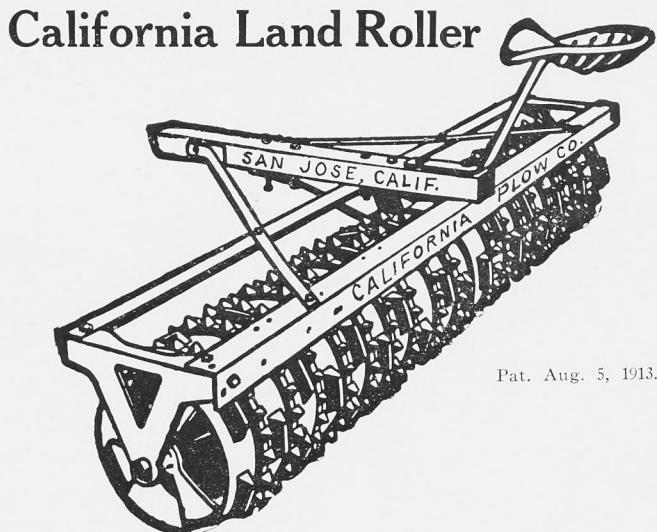

SAN JOSE, CALIF.

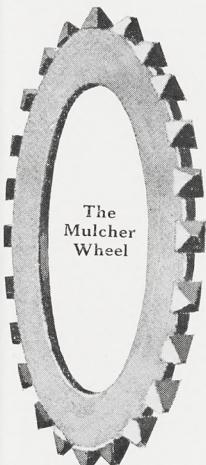

Th

The Packer Wheels

Pat. Aug. 5, 1913.

The  
Mulcher  
Wheel

HERE is shown our COMBINATION ROLLER-PACKER-MULCHER-CLOD SMASHER AND RAIN PRESERVER. The patented wheel with scientifically designed lugs is an actual RAIN PRESERVER, i. e.; the rain stays where it falls, whereas the continuous roller type presses the soil into furrows thus making gutters through which the rain runs off the high ground into the low spots and thereby making innumerable mudholes. Each wheel and section is a solid casting. Many other rollers are made by bolting two castings together, which only makes a troublesome and short life tool.

The Mulcher Wheel, between the packing wheels, plays up and down, stirring the surface and forming a dry mulch to prevent evaporation of moisture.

By removing two center wheels, it makes a perfect roller for rowed crops. Split axle collars are furnished to hold wheels in place. The machine is all metal except the pole. Axles are 2 inches in diameter. Furnished with stub pole for tractor use. Ask for circular R 1.

Size	Diameter	Weight	Horses Required	Price
6 feet	18 inch	750	2	\$.....
8 feet	18 inch	1000	2-3	\$.....
10 feet	18 inch	1250	4-5	\$.....
16 feet, (3 sections)	18 inch	2000	6	\$.....

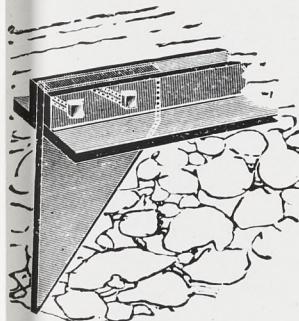

Doubletrees and neck yoke extra.

Note Design of Patented Tooth

## California ALL STEEL Drag Harrow

Patented Feb. 16, 1913

### TWICE OVER WITH A **Bokop** EQUALS FOUR TIMES WITH ANY OTHER HARROW

THIS Harrow was designed and built for long service—it will outlast three of any other type. It is made of the best quality steel throughout, and is sufficiently strong and flexible to stand up under all conditions.

The **Bokop** patent combines the best features of all harrows ever made. There are no levers—no parts to get out of order. In fact the entire construction is so simple it needs practically no attention to give a life time of service. The patented teeth, which are powerful daggers of steel, are securely bolted and riveted between two steel angles and have no chance to work out of position; although the teeth are so securely fixed in the frame there is no difficulty in removing them for renewal or repair. When you see how perfectly they cut up the soil—you'll wonder why somebody didn't think of the idea years ago.

Adjustment of the clevises gives many different angles of pulling. The Harrow teeth pull two ways; vertically and slanted back, and have the property of clearing themselves from all accumulation of soil.

Soil properly pulverized is half fertilized—an old fashioned spike tooth harrow can't do it. They are made in two, three, or four sections to a set.

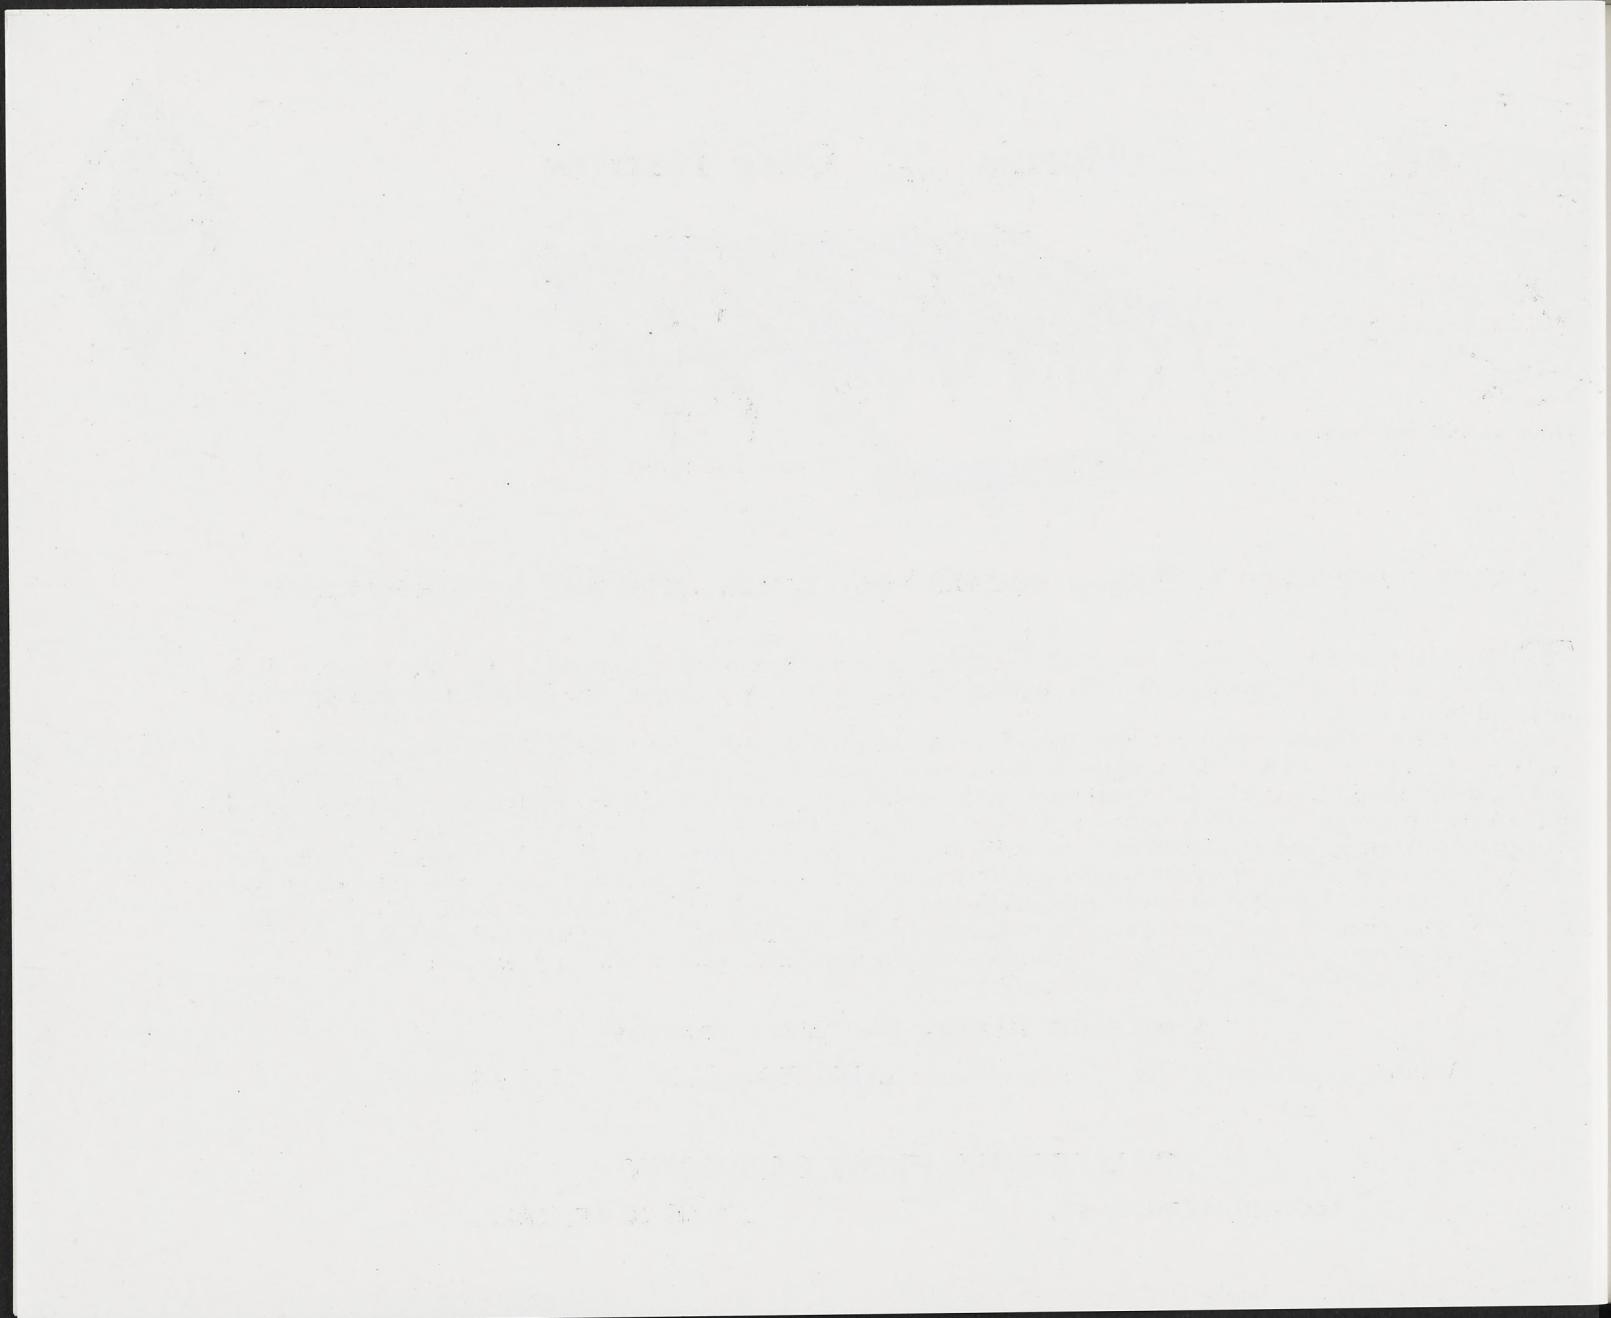

#### A SUPERIOR HARROW FOR SMALL TRACTORS

**SAN JOSE, CAL.**

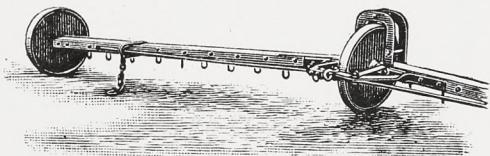

# Stump Jump Drag Harrow

With 2 or 3 Wheels.

The introduction of Stump Jump Drag Harrows has made possible the refining of soils where low stumps, grubbed sage brush or stony land is cultivated.

The illustration shows an implement in action as when passing over low stumps. It is completely flexible so that the teeth which come in contact with the stumps or stones are those only which leave the ground, and they re-enter immediately after the stone or stump is passed. Really good work is done by our stump jump harrows and with almost imperceptible concussion on the horses' shoulders.

#### Size

3 in set, 20 teeth each, covers	9 ft.	Approx. Weight	Price
4 " " 20 " " "	12 ft.	460 lbs.	.....
5 " " 20 " " "	15 ft.	540 lbs.	.....
6 " " 20 " " "	18 ft.	650 lbs.	.....
		760 lbs.	.....

(Specially hard steel tines, with well seasoned strong pulling tree.)

The above prices include bar with two wheels. If three wheels fitted to bar the price will be \$15.00 extra. If wheels not required an allowance of \$10.00 can be made.

## Cuban Rotary Tractor Harrow

This ROTARY TRACTOR HARROW, built of steel and strongly reinforced, has been designed for use in the cane fields of Cuba and is therefore specially fitted for work where there is much trash to encounter. It works with a rotary motion and thoroughly pulverizes and stirs the soil. It cleans itself of trash at each revolution. It can be made to rotate in either direction by swinging the arm with the rolling weight over to the opposite side, reversing the motion. In orchards and vineyards this harrow will work close to the trees and vines without injuring them. The side rotating toward the rear should always go nearest the tree or vine. A circle of steel can be put on the outer edge of the frame to give further protection. On rolling lands, if hitched separately or behind other implements, the upward rotary action has a tendency to hold the entire outfit from slipping downward. The teeth are 1 inch square by 12 inches long and are solidly bolted to the frame.

Size, 6 ft. diameter

Approximate weight, 700 lb

San Jose, Calif.

## The Golden Gate Weed Cutter

Pat. Dec. 5, 1911, and Jan. 30, 1917

**T**HIS practical horse drawn implement offers farmers, orchardists and truck gardeners a cheap and efficient method of exterminating obnoxious weeds before and after rains on cultivated lands. Not only will the keen blades of high carbon steel cut and destroy weeds but they will also stir up the surface soil, thereby forming a mulch which will preserve moisture. The blades can be adjusted to meet all requirements even to work between, or straddling rows, working close to trees, etc. They are easily and quickly detachable, and with the levers can be raised on the shoes off the ground so that it is ready for transporting from one field to the other. It is built throughout of steel and is strong and durable.

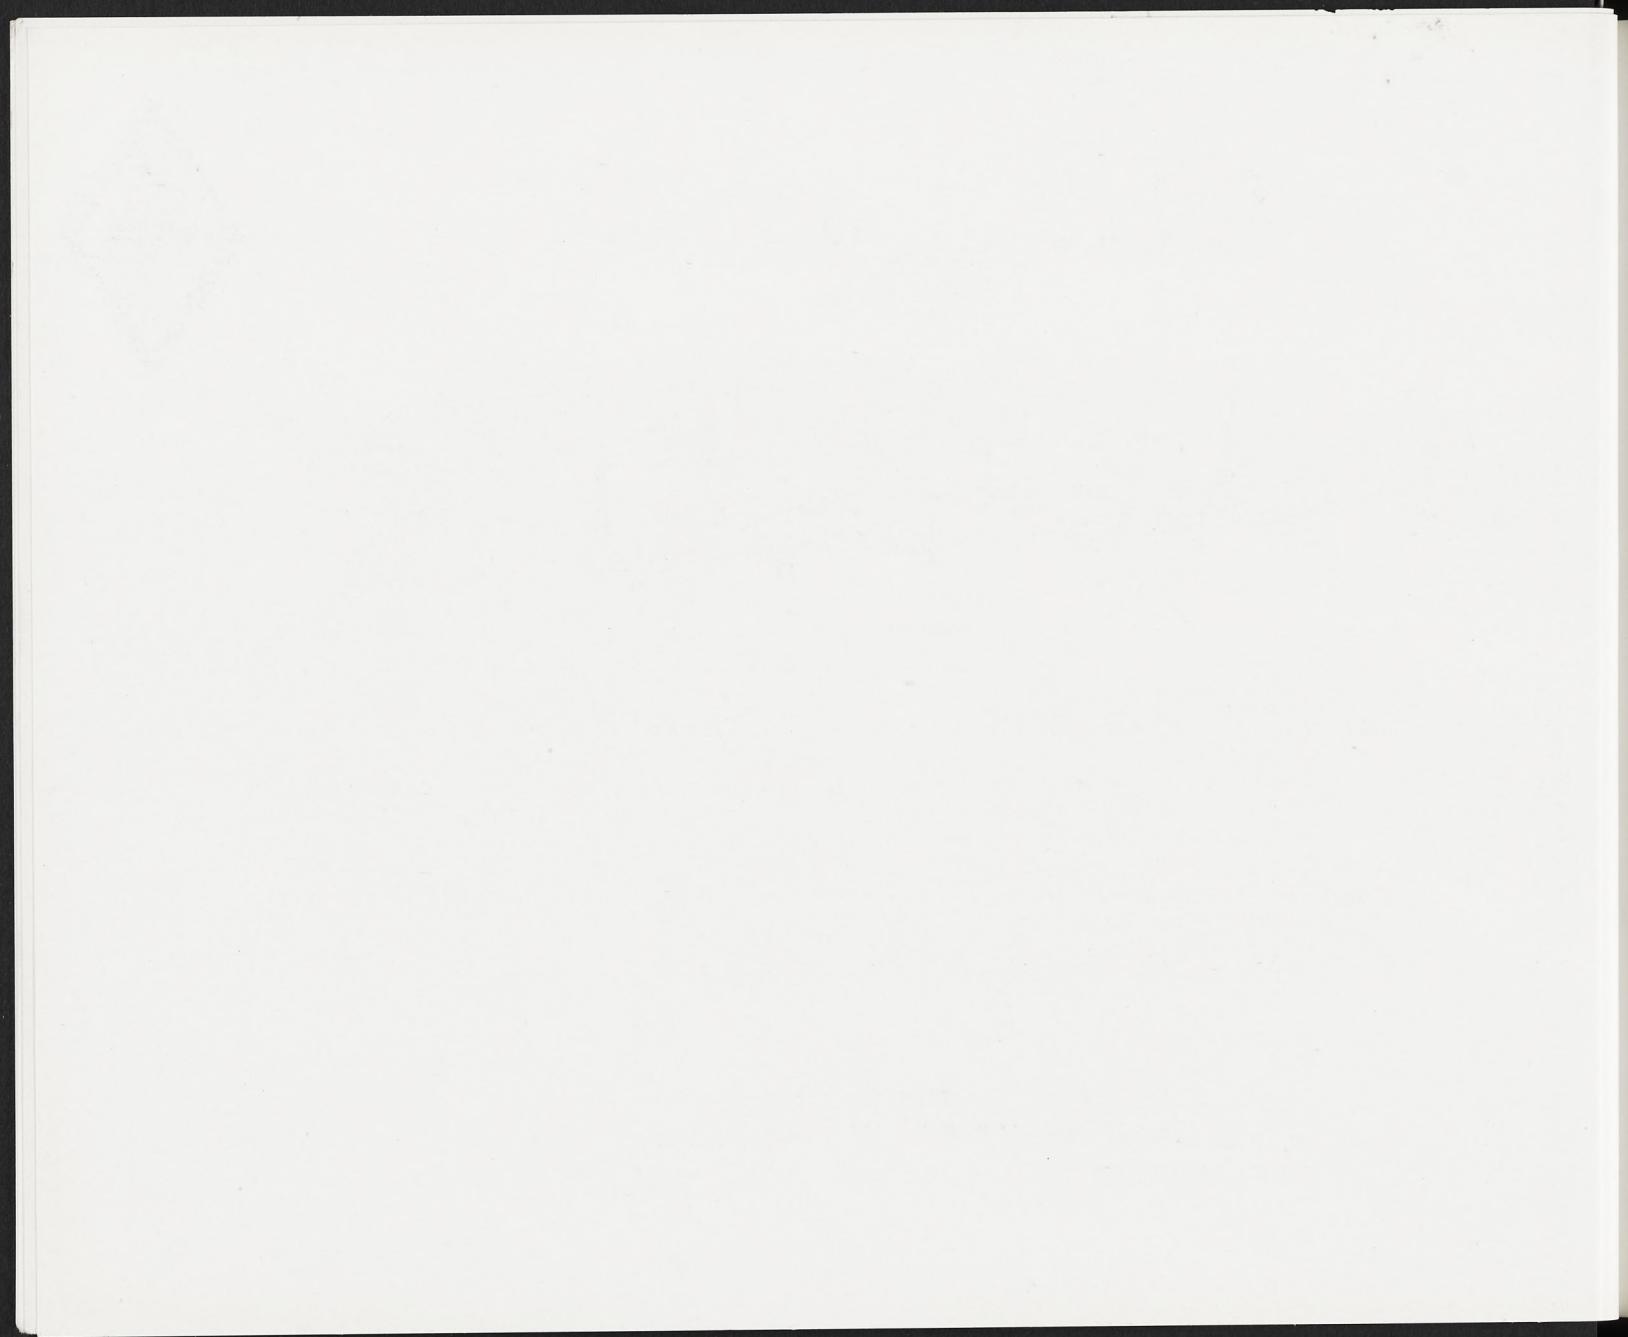

Hundreds in use in California and are being shipped all over the world.

Cuts 7 feet or less.

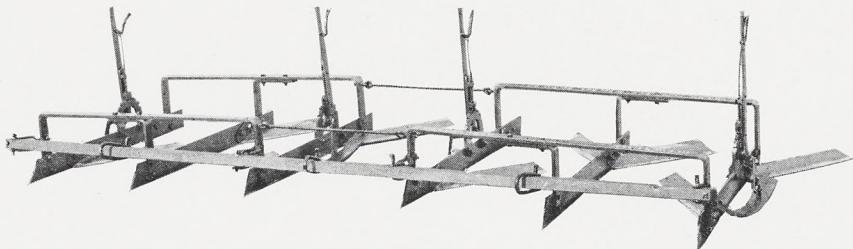

Weight 230 lbs.

Price \$.....

**CALIFORNIA PLOW COMPANY**  
**140 POLHEMUS ST.** **SAN JOSE, CALIF.**

## The Golden Gate Weed Cutter

Pat. Dec. 5, 1911 and Jan. 30, 1917

### AN IMPLEMENT THAT KILLS WEEDS, CULTIVATES AND MULCHES

**T**HIS size and style Golden Gate Weed Cutter is for tractor use. It is the same as shown in our "Horse Drawn" circular, excepting there are two weeders instead of one. Therefore it can also be used as two separate horse drawn implements. The farmer or orchardist with large acreage who desires to keep his farm free from weeds and other foul vegetation, requires this implement, and the practical farmer will quickly recognize the valuable features possessed by this strongly built—all steel farm necessity. It will cut a path 14 feet wide.

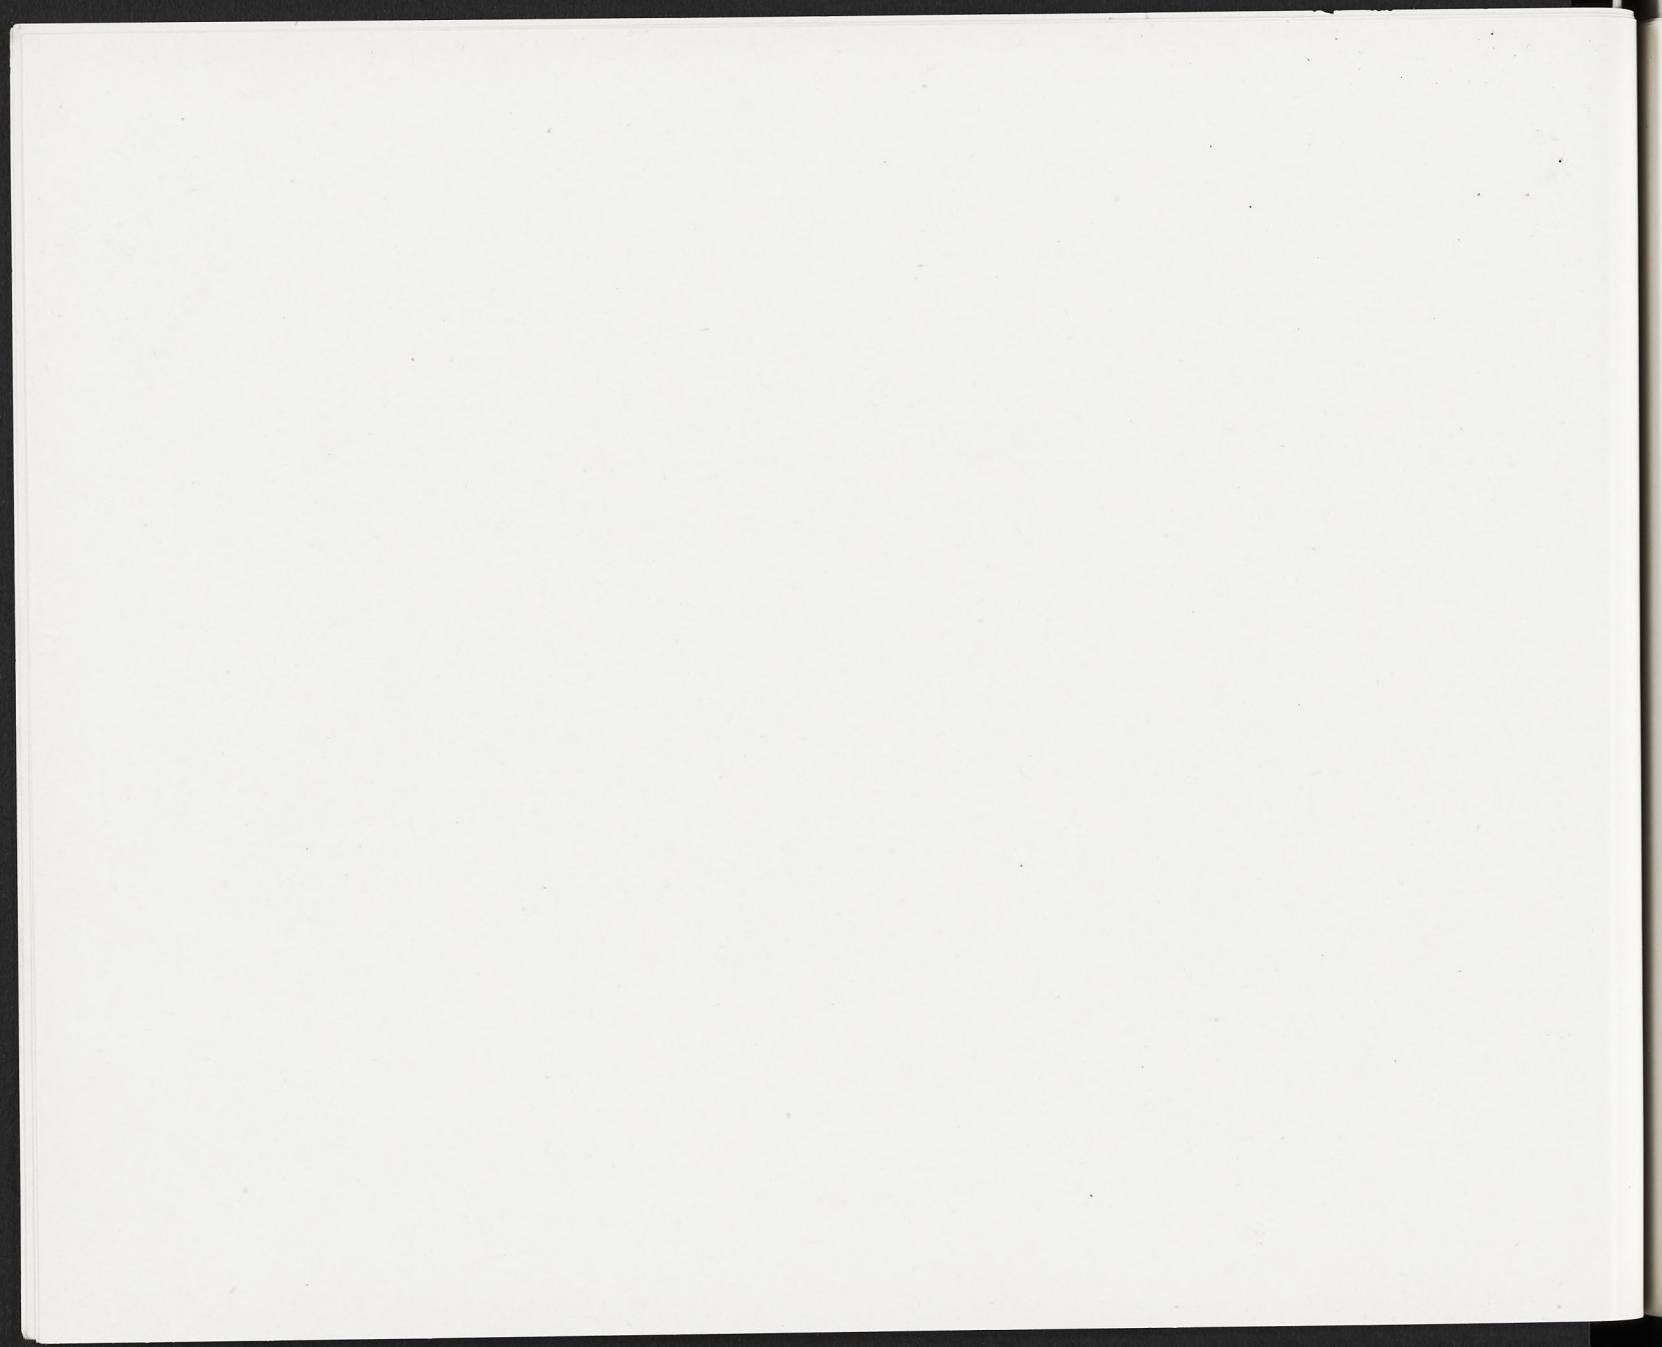

Weight 500 lbs.

Price \$.....

**CALIFORNIA PLOW COMPANY**

**140 POLHEMUS ST.**

**SAN JOSE, CALIF.**

# California Weeder and Mulcher

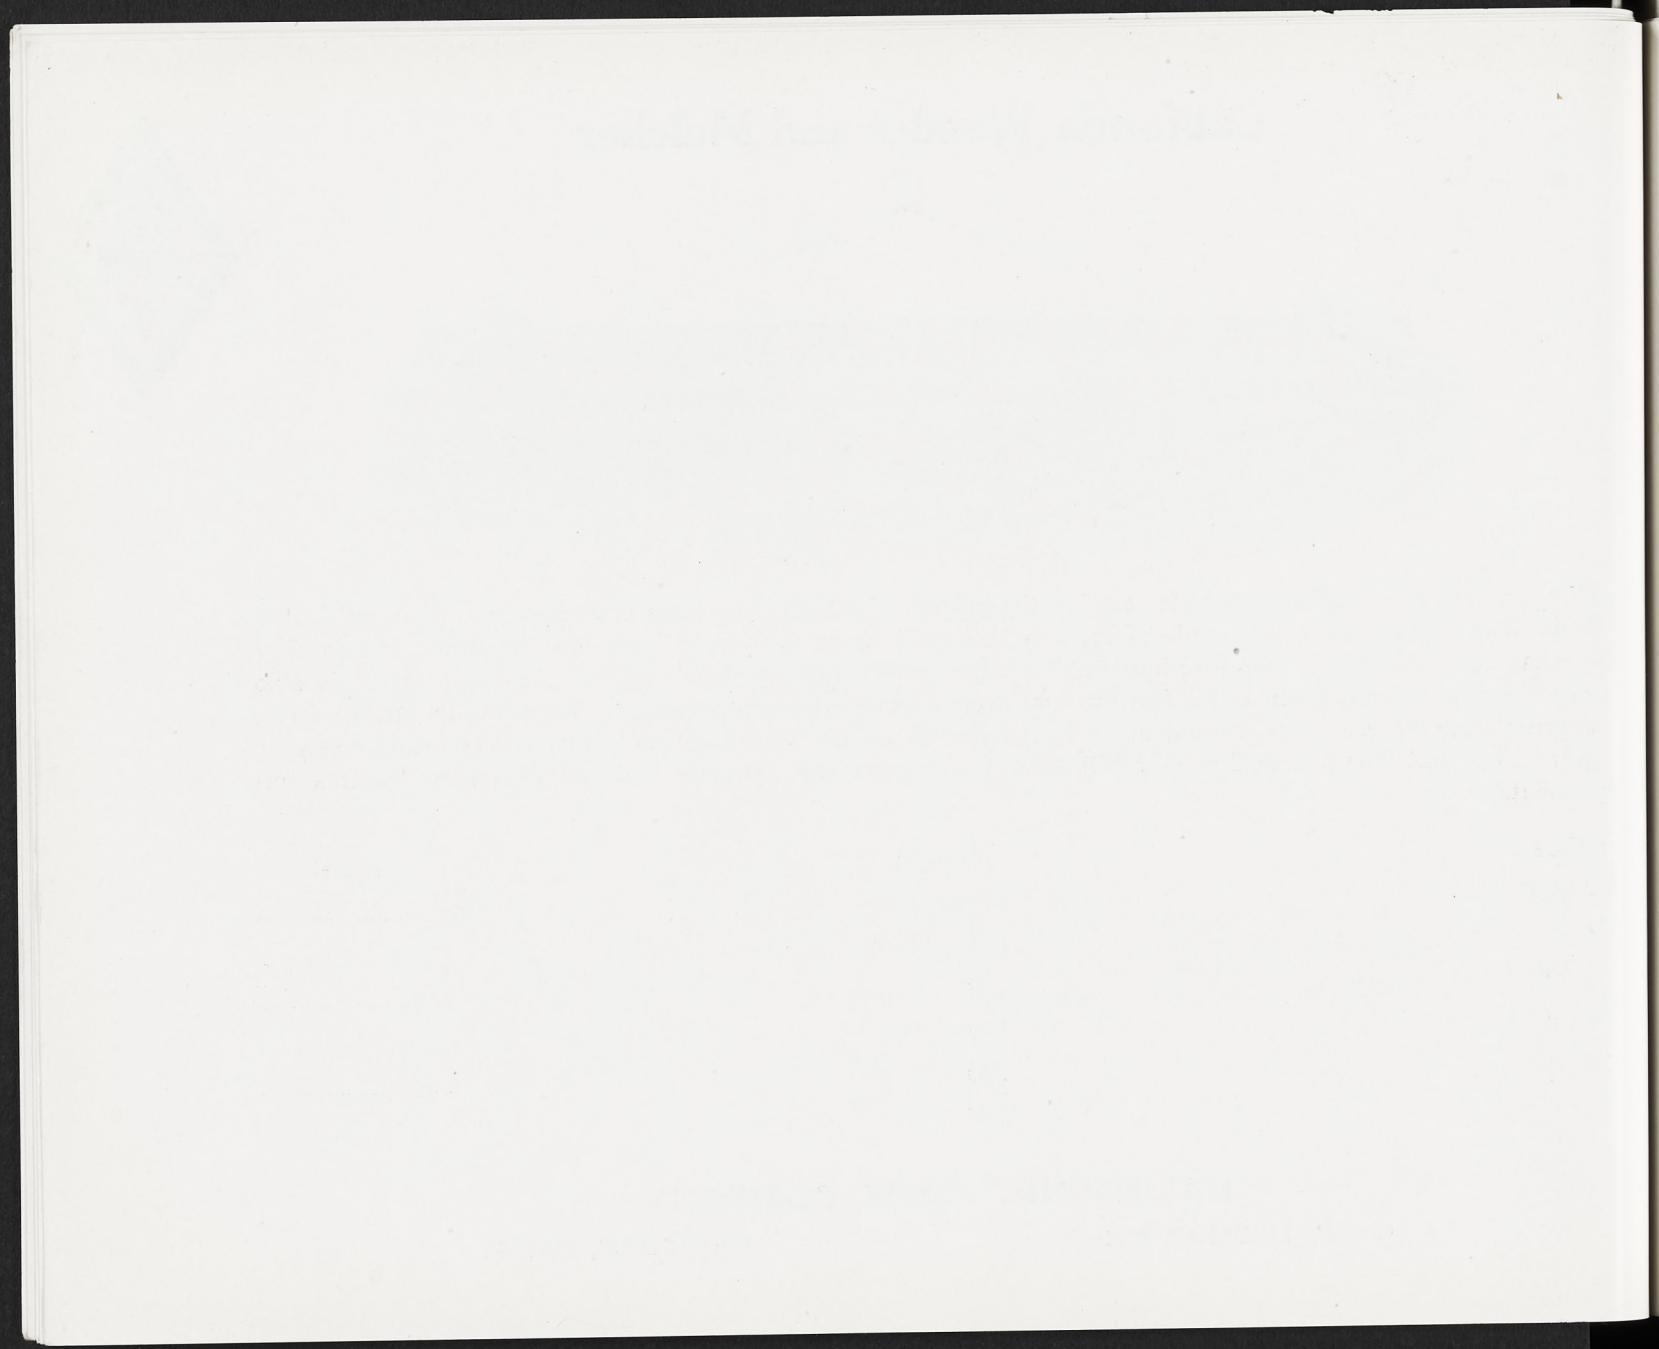

This is a very efficient implement for cutting the growth of weeds after rains or irrigation on any cultivated land. The knives, which are made of high carbon steel, wear uniformly from heel to point, and as they over-lap each other, it is therefore impossible to miss any weeds in their course. This implement is also very valuable in smoothing down furrows and preparing the soil for cultivation. Its utility in various ways, together with its low price, should make it a necessity on every orchard and farm where beans, beets or grain is grown. The practical farmer will quickly recognize the valuable features possessed by this implement.

SAN JOSE, CALIF.

## One Standard Subsoil Plow

**S**UBSOILING is generally conceded to be of great benefit to the soil in any country, but more especially in our Western States, where the ground is never frozen, but is packed from year to year, making it very hard and allowing a large percentage of the natural rainfall to run off, that would be absorbed if the ground was broken up to receive it.

The use of these tools in preparing ground for raising grain has proven a thorough success and the value of their use on ground for alfalfa and other crops cannot be questioned.

The above tool is built in sizes of One to Seven Standards, and all will work to a depth of twenty-four inches, thoroughly breaking up the ground and putting it in the best possible condition to hold the moisture for the crop following.

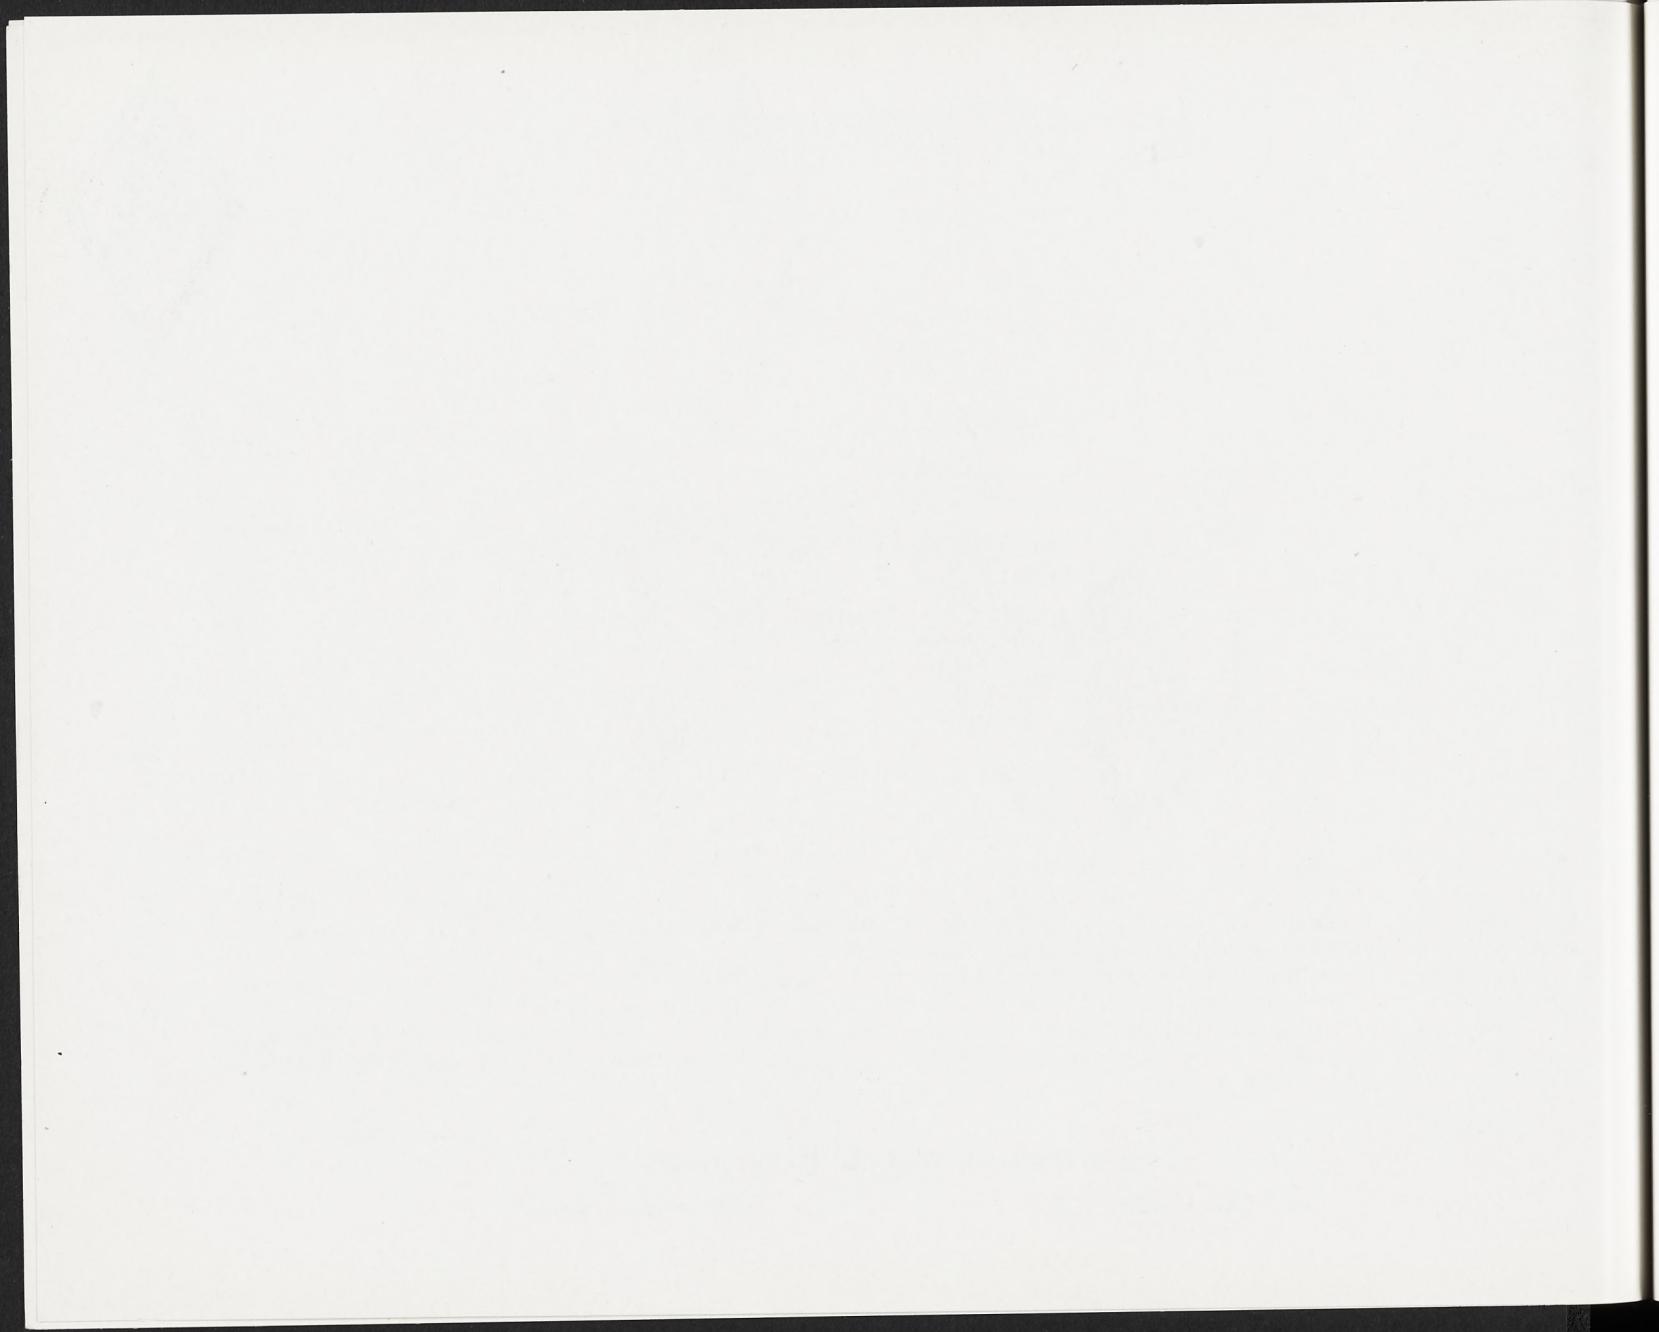

Weight.....

Price \$.....

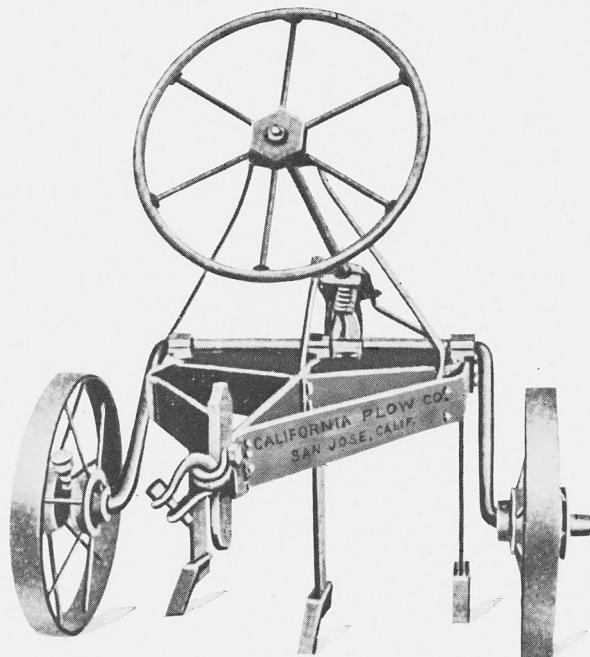

**CALIFORNIA PLOW COMPANY**

140 POLHEMUS ST.

SAN JOSE, CALIF.

## Three Standard Subsoil Plow

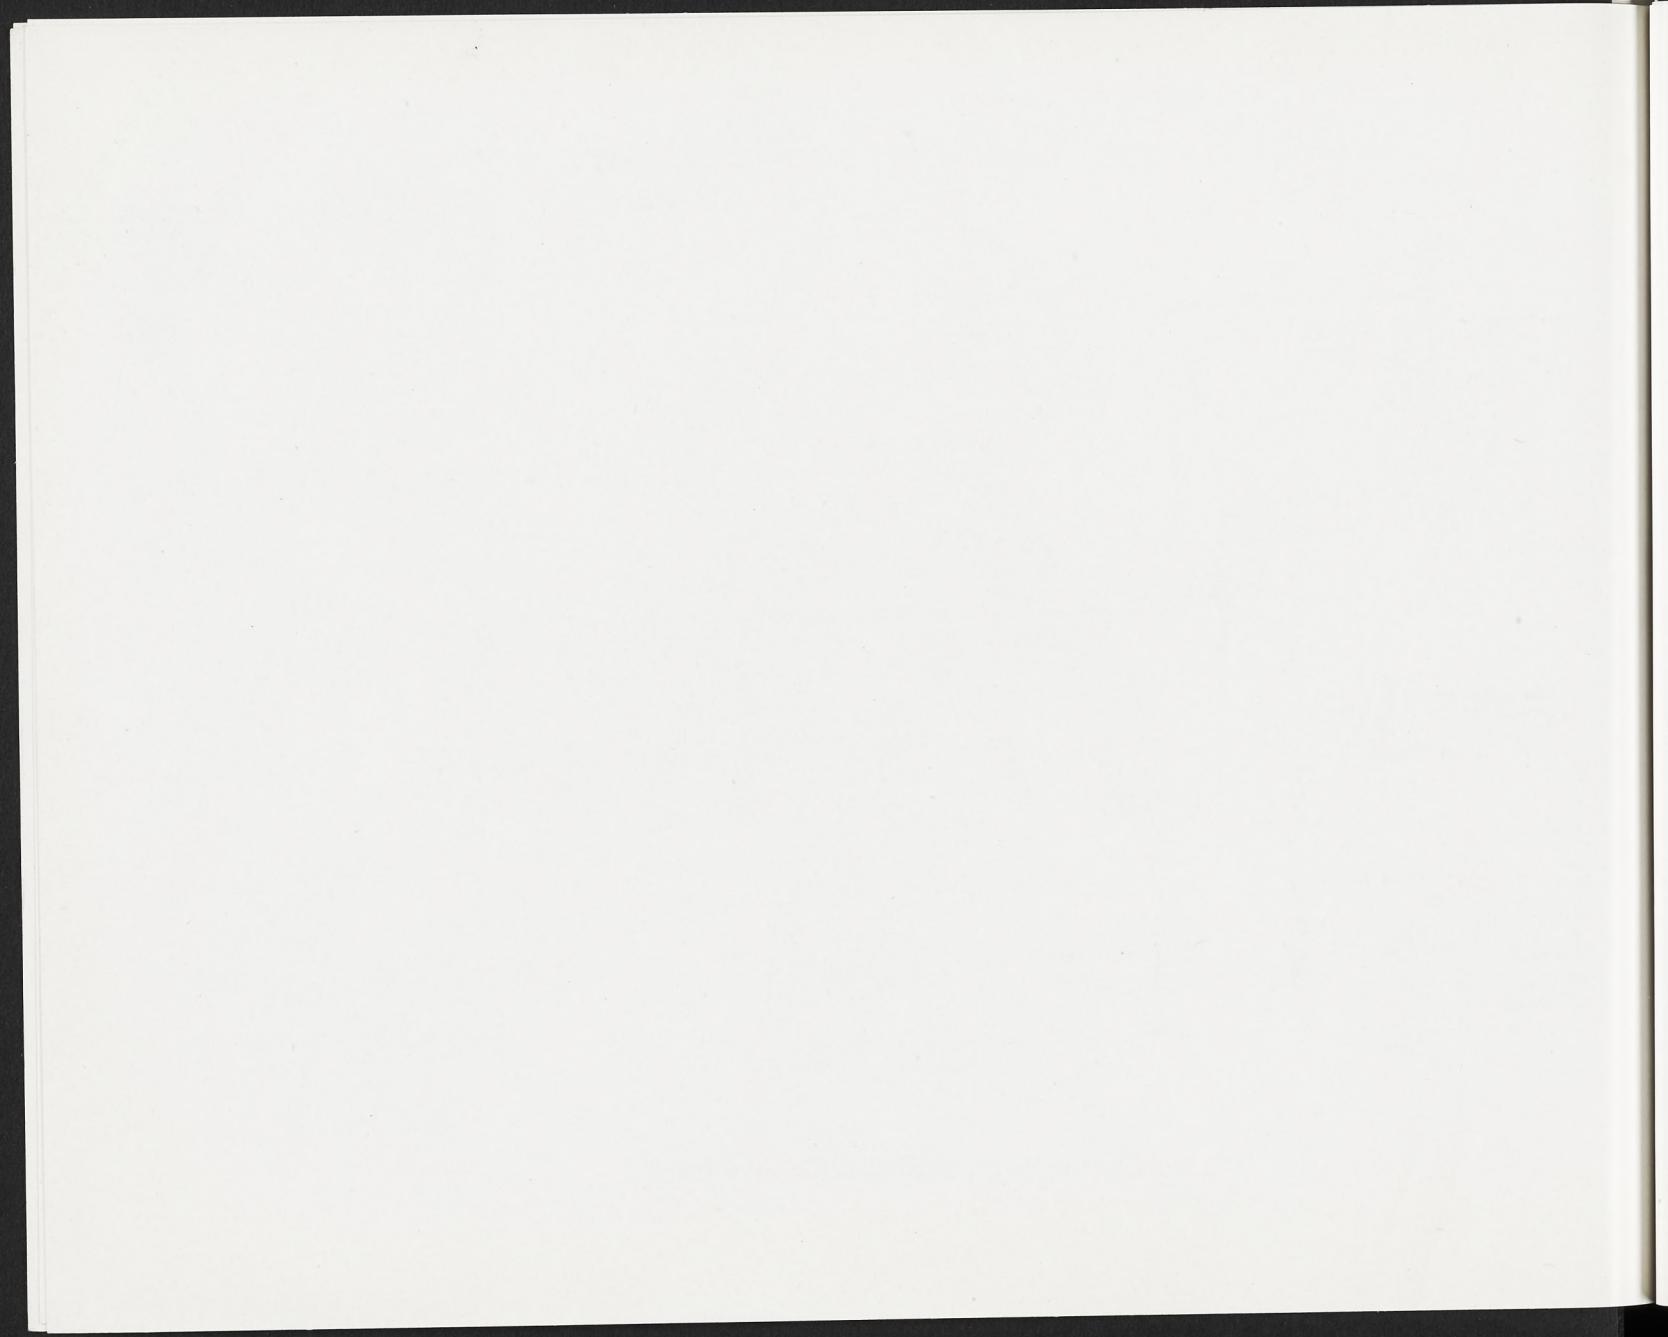

IS built to use behind the medium sized tractors. The same quality of steel is used in its construction as in our larger subsoil plows. All castings except raising sector are of crucible steel. The adjustable clevis in front allows the frame to set at any depth required, and the frame is leveled by the hand wheel.

Points and shins are made from high carbon steel and are easy to replace when worn. This tool can be handled by the tractor driver without extra help.

Weight.....

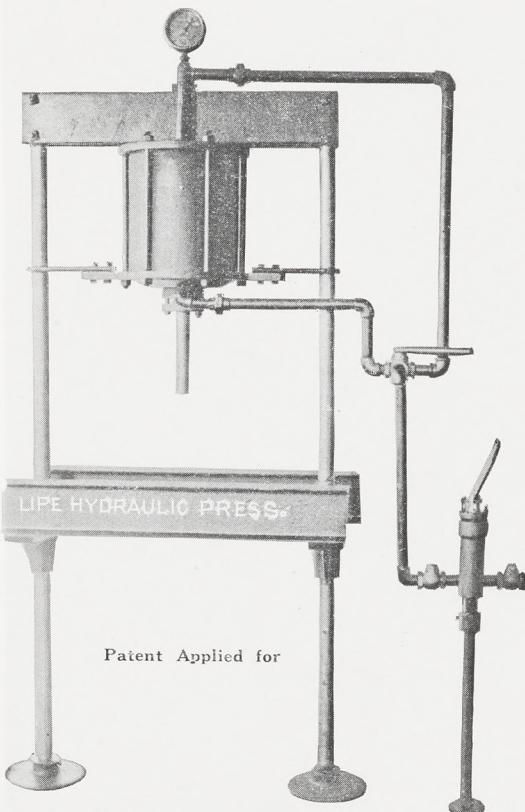

Price \$ .....

**CALIFORNIA PLOW COMPANY**  
140 POLHEMUS ST. SAN JOSE, CALIF.

## The Lipe Hydraulic Arbor Press

**A**N economical one man Press—always ready—always reliable. Extensively used throughout the country in Auto, Truck and Tractor repair shops for straightening axles, crankshafts, frames, etc. Bending sheet iron flanges for frame patches, and all kinds of flats, rounds, I beam, angles, channels, etc. Pressing in bushings without marring or twisting the thinnest bushing. Riveting ring gears to spiders with cold rivets, better than when using hot rivets and hammer.

Every repair shop and garage should have this Press. It will pay for itself several times over each month. Nothing to get out of order. GENUINE ECONOMY.

This Hydraulic Press is also extensively used by packing houses in packing fish, and many other places where heavy press work is required.

### CAPACITY 30 TONS

**Construction:**—Height over all, 7 feet; floor space, 24x48 inches. The uprights are 2 inch ground steel with a distance of 34 inches between. The bolster consists of two 6 inch heavy type I beams, having a spread of from 2 inches to 12 inches, that can be adjusted to any desired height. The distance from ram to floor is 4 feet, and, by having a small hole in floor, work of excessive size can be handled. The cylinder is 13 inches long with a diameter of 13 $\frac{1}{4}$  inches permitting the ram to have a 10 inch stroke. The pipe and fittings have a 500 lb. pressure capacity. The pump is a double plunger type with a 1 1-3 inch for low pressure and 1 inch for high pressure.

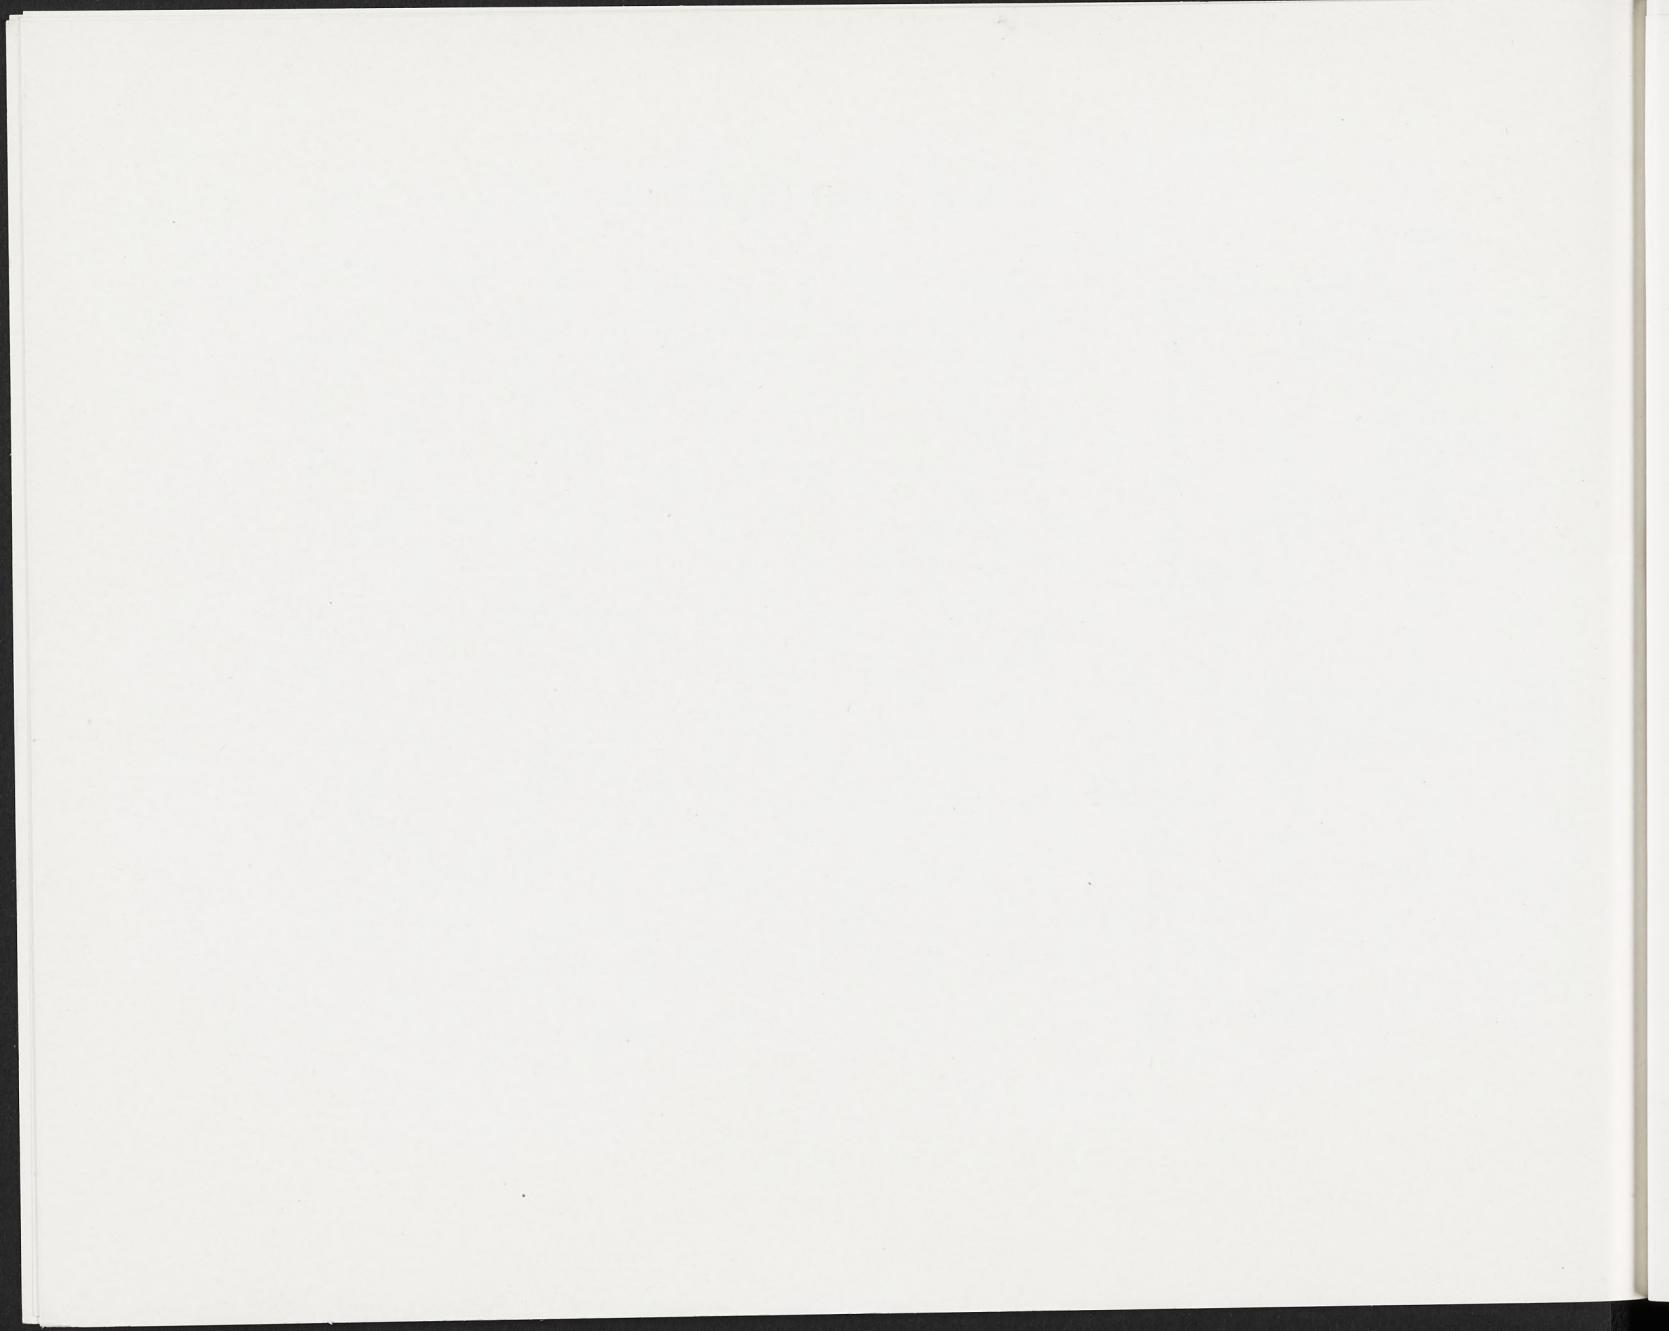

This press is used in our own factory for bending all heavy frames and axles—90% of which is bent cold.

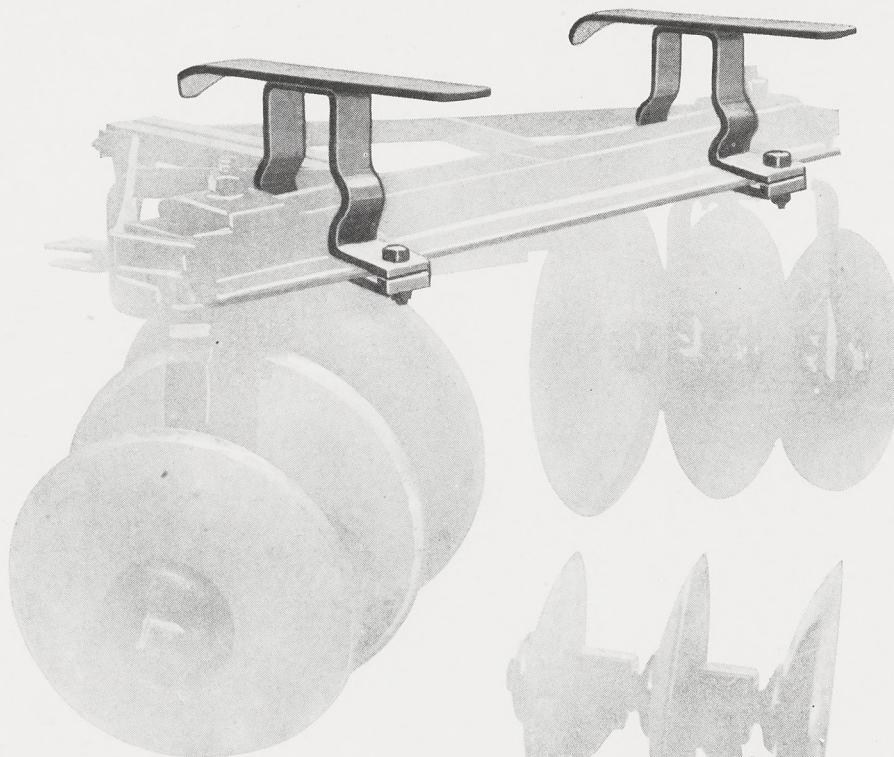

Capacity, 30 tons      Weight, 800 lbs.      Price, \$.....

# California Reversible Ridger

Makes a High, Compact and Watertight Ridge  
Will Work Well Behind Large and Small Tractors

Patent No. 1740874

## CALIFORNIA PLOW COMPANY

810 POLHEMUS STREET

SAN JOSE, CALIFORNIA

(OVER)

## ESPECIALLY DESIGNED FOR ORCHARD AND VINEYARD WORK

This ridger is also made with wheels and a power lift at higher price.

It will build a finished ridge—ONE THAT WILL HOLD WATER AND ONE THAT CAN'T FALL DOWN, leaving no laborious shovel work for the Orchardist or Farmer to do by hand.

By reversing the disc gangs, this implement will knock the ridges down again and leave the land level and smooth to operate a tractor over. With the disc gangs reversed, this implement will make irrigation or drainage ditches, and by reversing, fill them again.

This ridger has thrown up a good sized, water-tight ridge in ground where other makes would not work at all.

Orchardists and Vineyardists can cultivate close up to trees and vines, doing away entirely with the use of horses.

In vineyards, berry or hop fields this implement will in one operation plow the entire distance between rows out (up to 8 ft.) and by reversing, throw the dirt back to the vines again, leaving the land level and in good tilth. It will enter the ground to the depth of an ordinary mold board plow as the discs are deep dished and of graduated diameters.

It is wonderful for use in banking up or cultivating crops planted in rows like tomatoes, cantaloupes, asparagus, etc., and can be used to break down and level these beds.

It is an excellent cover crop disc and will actually turn under growth that prevents other disc harrows from working.

These implements are indispensable in any Orchard or Vineyard of importance. They multiply the earning power of the men that use them throughout the country and are quickening and lightening their work about 60 per cent.

Price—Five foot Frame.....

—Six foot Frame.....

Size—6 discs

Weight Approximately 650 lbs.

# TERMS OF BUSINESS

## ORDERS

**W**HEN ordering, name of article should be plainly written, using description given in our catalog to designate what is wanted. Name and postal address should be written in full; Also the railway station or shipping point to which the goods are to be consigned.

## DELIVERY

On the Plows and Implements enumerated herein, we quote prices delivered at either the Railway Station, San Jose, or Wharf, San Francisco, and upon receiving the Railway's or Shipping Co's receipt for the goods in good order and condition, our liability ends, and the goods are thereafter in transit at the purchaser's risk. We are always glad to lend our assistance in obtaining settlement for damage or loss, but neither the Railways or Shipping Co. should escape liability for damage or loss due to them.

The illustrations given in this catalog are shown to convey a general idea of the goods only, and are not binding as to detail.

## TERMS

**DISCOUNT** for cash with order, five per cent.; net cash within 30 days from date of invoice.

We prefer to have the cash in the case of a first transaction, or a reference from some bank or business house. **INTEREST** on overdue accounts is charged at the rate of one percent per month. Terms may be arranged for as per our printed price lists.

We invite correspondence respecting our manufactures, and shall always be glad to give any information in our power.

We extend a cordial invitation to all to call and inspect our full line at any time.
